Amdt. dated April 4, 2007

Reply to Office action of March 8, 2007

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

(Currently Amended) A retaining wall fall protection system comprising:

a plurality of base plates;

a plurality of uprights connectable to the base plates;

cross-braces mountable between adjacent uprights;

guard rails mountable between adjacent uprights;

a stand-off assembly mounted to said uprights and having a standoff leg adapted to maintain a predetermined distance between the retaining wall and the uprights; and

an attachment meehanism assembly attachable to the stand-off assembly and adapted to engage the retaining wall to temporarily fix said upright to the retaining wall.

- (Original) The retaining wall fall protection system of claim 1 further comprising a leveling adjustment screw pivotally attached to each base plate and having a leveling adjustment nut threaded thereon for supporting said upright.
- (Original) The retaining wall fall protection system of claim 1 comprising a coupling tube for connecting segments to form an upright of a desired height.

Appl. No. 10/826,782 Amdt. dated April 4, 2007

Reply to Office action of March 8, 2007

 (Original) The retaining wall fall protection system of claim 1 comprising a guardrail bracket mountable to the upright; said guardrails being

mountable to said guardrail bracket.

5. (Original) The retaining wall fall protection system of claim 4 wherein

said guardrail bracket comprises a base mountable to the upright and at least one

toggle pin extending from the guardrail bracket base; said guardrail comprising an

opening at at least one end thereof which is sized to fit over said toggle.

6. (Original) The retaining wall fall protection system of claim 1 wherein

the standoff assembly comprises a base adapted to be secured to said upright; said

standoff leg extending from said base, and an attachment dowel extending from said

base;

said attachment assembly comprising an attachment strap having a first end and

a second end; an eyelet in said first end sized and shaped to fit over said standoff

assembly attachment dowel.

7. (Previously Presented) The retaining wall fall protection system of

claim 6 wherein said attachment strap is adapted at its said second end to engage said

retaining wall.

8. (Previously Presented) The retaining wall fall protection system of

claim 7 wherein said attachment strap is of a length sufficient to pass through said wall:

said attachment assembly comprising a retainer; said retainer cooperating with said

second end of said attachment strap to urge a surface of said retainer against a back surface of said retaining wall.

9. (Previously Presented) The retaining wall fall protection system of claim 8 wherein said attachment strap includes a slot at its said second end; said retainer comprising a body comprising a top surface, a bottom surface, a front face surface adapted to engage said retaining wall, and an opening in said front face surface; said retainer body opening being sized to allow said attachment strap to pass therethrough; said retainer further including a wedge which is sized and shaped to be received in said attachment strap slot; said wedge engaging a surface of said retainer and an edge of said attachment strap slot distal from said retainer surface to urge said retainer against said retaining wall.

10. (Previously Presented) The retaining wall fall protection system of claim 9 wherein said retainer body is generally elongate and comprises a back surface spaced from said front surface by said top and bottom surfaces; an opening in said back surface sized to allow said strap to pass therethrough; and aligned slots in said upper and lower surfaces of said retainer; said wedge passing through said slots and engaging a forward surface of said slots.

11. (Previously Presented) The retaining wall fall protection system of claim 10 wherein said retainer body slot forward surfaces are sloped; the slope of the slot surfaces corresponding generally to the slope of the wedge edges.

Amdt. dated April 4, 2007

Reply to Office action of March 8, 2007

12. (Previously Presented) The retaining wall fall protection system of

claim 9 wherein the block used to construct the wall is an open block having a horizontal

surface extending between side surfaces; the retainer body being generally C-shaped

and comprising an upper surface, a lower surface and a back wall; the forward surface

of said back wall defining said retainer front face; said back wall having a height greater

than the width of said block horizontal surface; said front face opening being positioned

adjacent said retainer bottom surface.

13. (Original) An attachment assembly for securing an upright of a

scaffolding system to a retaining wall comprised of a plurality of retaining wall blocks;

the attachment assembly comprising:

an attachment strap adapted at a first end thereof to be removably connected to

said upright and adapted at a second end to be connected to said wall.

(Previously Presented) The attachment assembly of claim 13 including

a standoff bracket mountable to said upright; said standoff bracket assembly comprising

a base adapted to be secured to said upright, a standoff leg extending from said base,

and an attachment dowel extending from said base; said attachment strap having an

eyelet in said first end sized and shaped to fit over said standoff assembly attachment

dowel.

15. (Previously Presented) The attachment assembly of claim 13 wherein

said attachment strap is of a length sufficient to pass through said wall; said attachment

assembly comprising a retainer; said retainer cooperating with said second end of said

attachment strap to urge a surface of said retainer against a back surface of said retaining wall.

16. (Previously Presented) The attachment assembly of claim 15 wherein said attachment strap includes a slot at its said second end; said retainer comprising a body comprising a top surface, a bottom surface, a block engaging surface adapted to engage said retaining wall, and an opening in said block engaging surface; said retainer body opening being sized to allow said attachment strap to pass therethrough; said retainer further including a wedge which is sized and shaped to be received in said attachment strap slot; said wedge having a first side edge which engages a surface of said retainer and a second side edge which engages a surface of said attachment strap slot distal from said retainer surface to urge said retainer against said retaining wall.

- 17. (Previously Presented) The attachment assembly of claim 16 wherein said retainer body is generally elongate and comprises a back surface spaced from said block engaging surface by said top and bottom surfaces; an opening in said back surface sized to allow said strap to pass therethrough; and aligned slots in said upper and lower surfaces of said retainer; said wedge passing through said slots and engaging a forward surface of said slots.
- 18. (Previously Presented) The attachment assembly of claim 17 wherein said retainer body slot forward surfaces are sloped; the slope of the slot surfaces corresponding generally to the slope of the wedge edges.

Amdt. dated April 4, 2007

Reply to Office action of March 8, 2007

(Previously Presented) The attachment assembly of claim 16 wherein

said retainer is generally C-shaped and comprises an upper surface, a lower surface

and a back wall; the forward surface of said back wall defining said block engaging

surface; said back wall having a height greater than the width of said block horizontal

surface; said opening being positioned adjacent said retainer bottom surface.

20. (New) A retaining wall fall protection system comprising:

a plurality of base plates;

a plurality of uprights connectable to the base plates;

cross-braces mountable between adjacent uprights;

guard rails mountable between adjacent uprights;

a stand-off assembly mounted to said uprights and having a standoff leg adapted

to maintain a predetermined distance between the retaining wall and the uprights; and

an attachment assembly attachable to the stand-off assembly and adapted to

engage the retaining wall to temporarily fix said upright to the retaining wall; said

attachment assembly comprising:

an attachment strap adapted at a first end thereof to be removably

connected to said upright and adapted at a second end to be connected to said

wall; said attachment strap is of a length sufficient to pass through said wall; said

attachment strap includes a slot at its said second end;

a retainer; said retainer cooperating with said second end of said

attachment strap to urge a surface of said retainer against a back surface of said

retaining wall; said retainer comprising a body having a top surface, a bottom surface, a block engaging surface adapted to engage said retaining wall, and an opening in said block engaging surface; said retainer body opening being sized to allow said attachment strap to pass therethrough; and

a wedge sized and shaped to be received in said attachment strap slot; said wedge having a first side edge which engages a surface of said retainer and a second side edge which engages a surface of said attachment strap slot distal from said retainer surface to urge said retainer against said retaining wall.
